SNIPER WATCH
INTELLIGENCE. SECURITY. SAFETY.

Next-Generation
Network & Cybersecurity

Why Sniper Watch?

We start with Why...

It is our mission to help organizations intelligently maximize profitability & ROI by enforcing comprehensive network & security protection through predictable budgetary spend so that they are free from security breaches, prevent business disruption, and protect their brand, their business, and their people.

WHO WE ARE

Sniper Watch is a comprehensive, Next-Generation Network Infrastructure & Cybersecurity Managed Security Solutions Provider (MSSP) that delivers cutting edge technology to secure all aspects of the enterprise infrastructure.

Our core belief is that no client should go without the tools and advisory to incur a breach, business disruption, and revenue loss.

WHAT WE DO

We deliver complete, ongoing secure infrastructure hardening, cloud-delivered network & security, **true** Managed Services, threat hunting, managed detection & response, and perpetual vCISO services. Our integrated "security that works together" approach reduces risk, breaches, revenue loss and brand defamation..

HOW WE DO IT

We do things differently. Our team continuously delivers, configures, pivots, innovates, modifies, and adapts to dynamic changes so that our valued client's business is secure from every vector of potential breach. Through our monthly vCISO approach, our client's technical business goals are constantly analyzed and optimized so that our clients can focus on their revenue-generating niche..

THE BIG PROBLEM

In today's modern technical business climate, organizations are getting breached every 39 seconds and they continue to wonder why. Often, businesses do not have the specialized skills, tools, or tactics in critical security areas that prevent disruption, revenue loss, brand defamation, or theft of personal identifiable information, digital records, company secrets, email and password information that could emulate an authorized user's behavior.

Businesses are forced to engage with overpriced, technology vendors who charge astronomical prices for a single project solution, leaving the customer with empty pockets to address other critical areas of their business. Well, **Partial Security is Not Security**...

UNPRECEDENTED TIMES
CALL FOR UNPRECEDENTED SOLUTIONS

Intent-Based Business Security

THE SOLUTION

Sniper Watch has revolutionized the technology industry for our clients. We are built from the ground up with security and our client result in mind. We consider our client's business, our business, and we would never prescribe a solution that we don't already implement for our organization.

We solve the client problem by perpetually delivering the entire security ecosystem to our clients daily, which allows our security team to continually add or modify the custom use-case configurations required to defend and prevent the most sophisticated attacks and day zero cyberthreats.
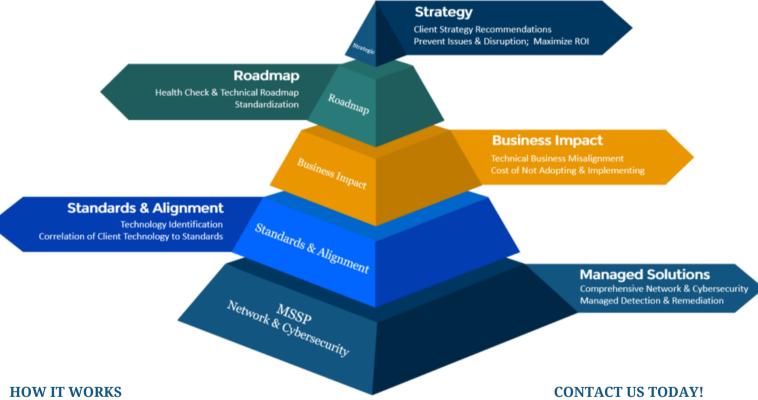

The Only Constant in Business is Change

Sniper Watch debunks the misconceptions about how customers implement a Secure Network Architecture & Cybersecurity Infrastructure.

THE CONCLUSION

Businesses of all sizes are experiencing unprecedented disruptions and unauthorized access due to lack of fundamental security adoption and advanced configuration techniques.

HOW IT WORKS

The Sniper Watch methodology starts with doing the small things right, which in turn will allow you to do the the big things right. The fundamentals often go overlooked and must be the foundation of any working structure.

We establish a baseline comprised of a solid foundation, deliver our core network & cybersecurity building blocks, and then continue to build up.

We continuously perform a Technical Alignment to ensure that all aspects of technology are commensurate with best practice and beyond industry standard. We act as your Trusted Technical Advisory and compare costs of not moving forward in a particular area of adoption. We then provide a technical roadmap towards implementation and continually work with you on your strategy to ensure seamless integrations and mitigate business disruption to existing processes.
